

## What I Feed My Senior Pets and Why ....

My dog, Cocoa, is a 14 year old female chocolate lab. She is still very active but I can tell she is not as stable in the back legs as she once was. I'm sure she has a few aches and pains too; so, I feed her Mobility Support from Royal Canin. I think that this diet has helped her to stay active and continue to enjoy running around on our farm.

I have two cats, Teaser and The Fire Cat, sisters, 11 years old. They have always been healthy but occasionally one of them will spontaneously vomit right after eating. I feed them Gastro Intestinal Moderate Calorie dry cat food from Royal Canin because it helps to control this problem. They are older cats now, and are as active as they used to be so the moderate calorie level helps to keep them in good body condition – not too fat or too thin, just right!
